THE WILD GARDEN

is nearer to nature than any other style of garden. It is simple, inexpensive, permanent, and being arranged on nature's plan it is not readily destroyed by occasional neglect.

Its Subjects are the best of our native plants and plants allied to them from countries having climates similar to our own. From northern Japan, Siberia, northern Europe and the mountainous parts of southern Europe, there have been obtained many plants adapted to the American Wild Garden.

Not a few of the best of these are bulbous plants which require to be planted in Autumn.

A select list of Bulbs suitable for Wild Gardens and natural plantations is given on the opposite page.

BULBS FOR WILD GARDENS AND NATURAL PLANTATIONS.

THE illustration on the upper half of the opposite page shows an effect produced by *Narcissus Poeticus*, the cheapest of the daffodils, planted for natural effect. The picture below it represents our native giant Wood-Lily, *Trillium grandiflorum*, one of the best and hardiest plants for forming natural groups for flowering in shady woodlands.

Among hardy herbaceous plants the asclepias, asters, boltonias, campanulas, columbines, dictamnus, epilobium, echinops, day-lilies, lobelias, lythrum, monarda, evening-primroses, rudbeckias, stokesia, thermopsis, are a few of the many available. We shall be pleased to furnish a larger list with prices upon application.

The following bulbous plants are especially suitable for natural plantations, and when once planted hold their own and increase with little or no further care.

FARQUHAR'S HYACINTHS

CULTURE OF HYACINTHS.

HYACINTHS IN POTS. It is important in the pot culture of the hyacinth to have rich, light soil—if possible, a compost of one-third decayed turf, one-third old rotten cow manure, and the remainder equal parts of sharp sand and leaf-mould. This compost should be made a few weeks before being used. If the bulbs are to be potted singly, pots five inches in diameter are the proper size, and the special Hyacinth pots, which are about two inches deeper than ordinary pots, are preferable. Cover the hole in the pot with a piece of broken pot, and over this place a layer of moss, which will keep the soil from clogging the drainage thus provided. Break off any offsets which appear at the base of the bulbs, and in potting place each bulb so that its top shall be half an inch below the surface of the soil and an inch below the rim of the pot. The soil should be of usual natural moisture, and should be pressed moderately firm. The filled pots may be placed in a cold frame where there is protection from frost, and well watered. An excellent plan is to place them on a bed of moist, sifted coal ashes, covering the pots to a depth of six inches with the same material. When well rooted, which will be in about six weeks, the bulbs may be brought indoors and forced. For the first two or three weeks they should be kept in a temperature not exceeding 50 degrees. Success in forcing depends much on their having strong roots before being brought to the light. The top grows rapidly, and unless the roots are started much in advance they are unable to nourish the plant, and failure results.

Hyacinths for early use may be potted in September or October; late planting is not advisable, as the bulbs deteriorate; when desired for late use, it is better to pot them in October and keep them in a cold frame above freezing until it is desired to force them into bloom.

To obtain dwarf foliage and fine flower spikes, Hyacinths when being forced should have plenty of manure-water, fresh air, and should be kept very near the glass. The blooms last much longer if shaded from the sun.

Hyacinths in Glasses. The single varieties are, with a few exceptions, best adapted to this mode of culture; they produce finer flower spikes than the double.

Fill the glass with clear, soft water, so as nearly to touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure, and afford some nourishment. The filled glasses should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be exposed gradually to the light. If the water in the glasses becomes foul, or diminished, replace it with fresh water at about the same temperature as the atmosphere in which the bulbs are growing; otherwise it need not be changed.

When well started, the bulbs should have plenty of light and air, without draughts, in order that the best development and brilliancy of color may be attained.

Hyacinths in the Open Garden. The ground should be dug to a depth of at least fifteen inches, and enriched with plenty of well-rotted cow manure.

Hyacinths may be planted from September until winter sets in; although if the highest success is sought they should be in the ground by the end of October. Bulbs planted early develop roots in the autumn, and these, if protected from injury by freezing and thawing alternately during the winter, enable the bulbs to produce much larger flower spikes than if the roots are not developed until spring. Frost reaching the bulbs raises them up, thus detaching them from their roots. Protection may be afforded by covering the beds with straw or leaves to a depth of six or eight inches, which should be removed early in the spring. Hyacinths should be set six inches below the surface of the ground and six inches apart.

Hyacinths in Boston Public Garden.

FARQUHAR'S EXTRA LARGE NAMED BEDDING AND FORCING HYACINTHS.

The Reduced Price at which these Hyacinths are offered this year makes them attractive for out-door bedding and winter forcing.

Average circumference 7 to 8 inches, except Yellow, which produces smaller bulbs.

This highly decorative class of Hyacinths is of unsurpassed excellence for producing fine color effects in public parks and private grounds. Being of distinct and decided shades, of almost uniform height, and blooming at the same time, they admit of the most artistic grouping. They are also very desirable for forcing singly in pots or grouped in bulb pans.

LARGE UNNAMED HYACINTHS FOR BEDDING AND FORCING.

These are well developed, sound flowering bulbs, superior in size and strength to the Mixed Hyacinths usually offered. Choice sorts only are included in these selections which are grown separately and put together in variety of shades of each color. Care is exercised to include only sorts which bloom at the same time and are of nearly uniform height.

EARLY ROMAN HYACINTHS.

White Roman Hyacinths.

Six of a Kind Sold at Dozen Rates; 25 at 100 Rates; 250 at 1,000 Rates.

THESE beautiful Hyacinths are indispensable to the florist in his autumn and winter cut-flower work; while to the amateur they are among the most easily cultivated and most satisfactory of flowering bulbs. The white variety, if planted early in September and gently forced, will bloom in November; the others require from two to three weeks longer.

When grown in pots or pans they are most effective planted in groups of six or more bulbs in each.

White. Extra Large. 60c. per doz.; \$4.00 per 100; \$30.00 per 1,000.

White. Mammoth. 75c. per doz.; \$5.00 per 100; \$40.00 per 1,000.

Pink. 60c. per doz.; \$4.00 per 100; \$35.00 per 1,000.

Light Blue. 60c. per doz.; \$4.00 per 100; \$35.00 per 1,000.

White Italian or Parisian. These are about a fortnight later than the Early White Roman Hyacinths and the blossoms somewhat larger. They are very useful for forcing, being fragrant and decorative. 75c. per doz.; \$5.00 per 100; \$40.00 per 1,000.

HYACINTHUS CANDICANS.

A showy, hardy plant, blooming in July and August, and producing spikes about three feet long, crowned with numerous large, pendant, bell-shaped, pure white blossoms.

Large roots, per dozen, 30 cents; per 100, \$1.75; per 1,000, \$12.00.

MUSK AND FEATHERED HYACINTHS.

Beautiful, hardy, early-flowering bulbs, succeeding in almost any soil and situation.

Musk Hyacinth. Yellow and blue; delightfully fragrant, per dozen, \$2.50; per 100, \$15.00.

Feathered Hyacinths. Violet; long, feathery plumes, per dozen, 30 cents; per 100, \$2.00.

SINGLE EARLY TULIPS.

FARQUHAR'S RAINBOW MIXTURE. (Trade-mark Registered.) The varieties included in this mixture are grown separately, and are all popular large-flowered bedding sorts of decided merit. The colors are carefully proportioned, and include white, yellow, pink, scarlet, crimson and many beautiful shades and combinations of these colors. The sorts are selected to flower at nearly the same time and with slight variation in height. For massed beds and grouping our Rainbow Mixture is unsurpassed. The bulbs offered are of the largest size and finest quality. Per doz., 35 cents; per 100, \$2.50; per 1,000, \$18.00.

SUPERFINE MIXTURE. Extra quality bulbs in many beautiful and varied sorts, flowering nearly together. Per doz., 20 cents; per 100, \$1.25; per 1,000, \$10.00.

Single Early Tulip, Joost Van Vondel White.

DOUBLE TULIPS.

A VERY ornamental and useful class, flowering usually about ten days or two weeks later than the Single Early Tulips. They are deservedly popular for bedding in both public and private grounds, the large double pæony-like blossoms being highly decorative and of long duration.

DOUBLE TULIPS.

FARQUHAR'S RAINBOW MIXTURE.

(Trade-mark Registered.) This mixture is composed of the best named sorts of bedding Double Tulips, grown separately and put together in studied proportions. It contains a liberal allowance of the showy light colors, white, yellow, pink, etc.; and all the sorts are selected to be of nearly uniform height and to bloom at nearly the same time. Per doz., 30 cents; per 100, \$2.00; per 1,000, \$14.00.

The Darwin Tulips are the strongest race of all, their massive leaves being often eight inches broad and their splendid flowers two to three feet in height. They bloom with the Columbines, three or four weeks after the Single Early Tulips. Clumps of them along the edge of shrubbery and in hardy plant borders are very effective.

LATE SINGLE OR MAY-FLOWERING TULIPS.

THESE flower in May: usually they are in full bloom about Memorial Day. They are very showy, and contain colors not found in any other class of Tulips. They are valuable for cut-flower use both to the amateur and florist. They are also in demand for bedding and for planting in clumps in borders of hardy perennials.

NARCISSUS JONQUILLA OR JONQUILS.

The delicately graceful forms, delicious fragrance, and deep yellow color of their blossoms have made the Jonquils favorites of the amateur and necessities with the florist. They are easily forced, and if started early may be flowered by Christmas, or even earlier. Plant six or eight bulbs in a six-inch bulb pan, covering the crowns half an inch, and treat them in the same manner suggested for hyacinths.

Six of a Kind Sold at Dozen Rates; 25 at 100 Rates; 250 at 1,000 Rates.

A VERY decorative class of bulbous plants for greenhouse and window cultivation, but not hardy out of doors in our climate. They produce enormous trusses of delicately fragrant flowers, varying in color from snowy white to deep yellow. Treat the bulbs in the same manner as noted for Hyacinths, except that the bulbs should be set half an inch deeper in the soil. They may be easily and quickly forced: our florists frequently have them in bloom by Thanksgiving.

SINGLE NARCISSUS.

THE commercial florists have been foremost to give the Narcissi or Daffodils the attention due them. They have learned how easily and successfully these lovely flowers may be forced into bloom during winter (even as early as Christmas), and how fascinating and lasting are the blossoms. They may be planted in pots or bulb pans six inches or more in diameter, several bulbs in each, according to size, and treated in the same manner as Hyacinths.

Narcissi are equally desirable for Spring bedding. They should be planted in October or early in November to produce the best results.

The bulbs should be set from four to five inches deep; the larger sorts five or six inches apart and the small varieties three to four inches. They should never be planted in very windy situations.

Groups of Daffodils in borders of hardy herbaceous plants and along the edges of shrubbery beds are exceedingly effective and delicately beautiful. They are charming, too, planted in beds, especially when combined with an undergrowth of the blue *Scilla Siberica*, Forget-me-not, or other dwarf spring flowers.

CORBULARIA OR HOOP PETTICOAT NARCISSUS.

Bulbocodium. (*Yellow Hoop Petticoat.*) Dwarf variety with deep golden-yellow flowers, a number of which are produced by each bulb. It is very pretty when forced; six to eight bulbs in a six-inch pan. It is also charming for edges of beds, and is very hardy. Per dozen, 85 cents; per 100, \$5.50; per 1,000, \$45.00.

MEDIUM TRUMPET NARCISSUS.

This class includes many of the most beautiful and useful Daffodils, with flowers often from three to five inches across. The characteristic feature of this section is that the trumpet is usually half the length of the divisions of the perianth, giving the flower a very refined form. In flowering they follow the Large Trumpet Narcissus. They are equally desirable for open-ground cultivation and forcing in the greenhouse or window.

Barrii Conspicuus. Large broad spreading perianth, primrose yellow; crown, yellow conspicuously edged with orange-scarlet, unexcelled for cutting and lasts long in water after being cut. Per dozen, 20 cents; per 100, \$1.25; per 1,000, \$10.00.

Incomparabilis. (*Star of Great Nonesuch Daffodil.*) Perianth, light yellow; trumpet, deep yellow; variable. Per dozen, 20 cents; per 100, \$1.25; per 1,000, \$8.50.

Incomparabilis Cynosure. Large showy flower of free growth, primrose-white perianth with bold orange-scarlet crown; a beautiful Daffodil; forces well. Per dozen, 20 cents; per 100, \$1.25; per 1,000, \$8.00.

Joss Flower or Oriental New Year's Lily.

These may be grown in pots of earth, but are more interesting and very satisfactory in bowls partially filled with pebbles and water. As the roots develop they form a network about the pebbles, thus supporting the plant when in bloom. They should be started and grown in bright light, but carefully protected from draughts. The flowers are mostly white with yellow cups and are very fragrant.

LILIUM PHILIPPINENSE

AWARDED

A Gold Medal

BY THE

Massachusetts
Horticultural
Society

This new Gardenia-scented white trumpet Lily is remarkable for the immense size of its flowers and its rapid growth. It has proved to be quite hardy in the New England States, and should be a valuable addition to our summer blooming Lilies. For forcing, it is an exceptionally fine variety, and when 8 or 12 bulbs are put in a large pan it makes a striking effect. The bulbs when grown in the greenhouse seem to be herbaceous and frequently produce three to four flower spikes from the same bulb. The bulbs when forced may be expected to flower in about sixty days, but out of doors the average would be from nine to twelve weeks.

LILIES FOR FORCING.

THE bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mold, rotten cow manure, and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break away the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

Lilium Harrisii.

LILIUM CANDIDUM.

(The Ascension or Old Fashioned English Lent Lily.)

THESE are grown for us in the north of France, and are the large, thick petalled variety. Pure white bell-shaped flowers, borne on erect racemes, excellent both for forcing and open garden cultivation. Bulbs from the Marseilles district have become degenerate and affected by disease. They should be avoided.

Canadense. (<i>Canadian Bell-Flower Lily</i> .) One of our most beautiful native lilies, flowers bright yellow, with black spots	.15	1.25	9.00
Canadense Rubrum. Crimson, spotted with black; 2 to 3 feet; flowers June and July . . .	.40	3.50	25.00

THE increased production of many varieties of these in Japan has greatly reduced their cost, and in consequence their use has become very general.

It is our opinion that we should plant the bulbs much deeper than we have done heretofore. While travelling in Japan, we found that the bulbs of the wild Lilies were usually twelve to eighteen inches below the surface, and we gathered the finest flowers from specimens growing on mountains of decaying lava where they had abundant rainfall and ample drainage. We believe that varieties like *Auratum* and *Speciosum* would be favored by being set ten or twelve inches deep and would be less affected by frost and drought. The beds should be thoroughly covered with leaves or litter during the winter.

Many of the late flowering sorts cannot be shipped from Japan until October; persons desiring to plant in the autumn should therefore prepare the beds and cover them with leaves to prevent the ground freezing until the bulbs arrive.

IRISES.

IRISES require rich soil and abundance of water. The finest blooms are obtained from established clumps; consequently when planted they should remain undisturbed. Set the roots in clumps of three or more, four inches deep, and protect with leaves or other mulch during winter. In planting groups of Irises it is possible to maintain a succession of bloom from May until late in the summer, by employing the four leading species, Spanish, English, German, and Japanese, which flower in the order they are named. We advise early autumn planting.

AMARYLLIS.

IN order to obtain fine specimens of Amaryllis the following method should be followed. On receipt of the bulbs in the autumn they should be placed where they will be always slightly moist and warm, under the benches of a greenhouse, for example; do not pot up the bulbs before the flowerbuds appear; when first potted give very little water, and promote growth by giving moderate bottom heat; increase the supply of water as the plants progress. Very often the mistake is made that bulbs are potted up too early; the consequence is that only leaf growth is made. The proper soil for Amaryllis is turfy loam enriched with rotten manure.

ANEMONES.

NONE of the spring flowers surpass the Anemone in brilliancy of color and profusion of bloom. They are very lasting, and have of recent years become very popular for cut-flower use and for table decorations. The florists now buy thousands of them to force. Plant in October or November, six roots in a six-inch pot or bulb pan, covering them one inch. They may be kept in a cellar or frame protected from frost until spring, when they may be placed in the greenhouse or window to bloom.

BOSTON

FREESIA REFRACTA ALBA ODORATA.

Freesia Refracta Alba Odorata.

OF all South African flowering bulbs the Freesia is doubtless the best known and most esteemed. The gracefully branched, fragrant flowers are of long duration, and being freely produced are profitable for commerical purposes, and satisfactory to amateurs. If planted early they may be had in bloom by Christmas. Plant eight or ten bulbs in a six-inch bulb-pan, covering them one inch.

	Doz.	100	1,000
Refracta Alba Odorata. Flowers pure white, with yellow throat; fragrant, and lasting for two weeks in water when cut.

Undulata Medio Variegata. (<i>Silver Variegated Day Lily</i> .) This valuable variety is now in demand for forcing; it forms a large rosette of almost white leaves, which is valuable in decorations. It is also extensively used for borders, being extremely hardy	.20	1.25	7.50

GLADIOLI.
EARLY FLOWERING.

These Gladioli are now extensively used by gardeners and florists for winter forcing; the dwarf, branching gracefully-formed flowers being excellent for cut-flower use. If the spikes are cut and placed in water when the first blossoms appear, they will keep expanding and remain beautiful for a week or two. Five or six bulbs planted in six-inch bulb-pans or pots make charming groups for conservatory or window decoration; the bulbs should be set an inch and a half deep.

Gladiolus Colvillei Alba.

	Doz.	100	1,000
Gladiolus Blandus. Blush rose, very early	\$0.35	\$2.00	\$14.00
Cardinalis Blushing Bride. Beautiful ivory white, with crimson flakes	.30	1.50	12.00
Cardinalis Peach-blossom. Delicate pink, extra fine	.85	5.00	
The cardinalis varieties are not only excellent for spring forcing, but are also of great value for early summer cut-flower purposes, for which use the bulbs may be planted in autumn in the open ground if mulched sufficiently to exclude frost, or they may be kept in moist earth in a cellar or pit during winter and planted in the open ground about the middle of April.			
Colvillei Alba. (<i>The Bride</i> .) Excellent forcing variety, producing compact spikes of pure white flowers of long duration. If planted in the open ground and protected from frost, they commence to bloom in July	.25	1.50	12.00
Colvillei Rosea. <i>New.</i> A most beautiful variety with delicate pink flowers; a great acquisition for cut-flower use	.25	1.50	12.00

LILY OF THE VALLEY.

(*Convallaria*.)

FOR open ground planting we offer large clumps, each containing many flowering crowns. These may be set from six inches to a foot apart and covered three inches. They succeed best in ground which is rather moist and partially shaded.

For forcing the Pips are to be preferred, being grown under conditions tending to promote vigorous and early blooming. Twelve to eighteen pips may be planted in a 6-inch pot, with all the fibrous roots carefully preserved, and keeping the crowns above the soil. Place them in a temperature of about 80 degrees, cover the crowns with loose moss, and keep them constantly moist with tepid water. They should flower in about five weeks. **Ready for delivery in November.**

Selected Dresden. The earliest, largest, and best for forcing. Strong pips with extra long roots. Per doz., 35 cents; per 100, \$2.50; per 1,000, \$20.00; per case of 2,000 pips, \$35.00.

Best Berlin. First-class selected pips for forcing. Per doz., 30 cents; per 100, \$2.00; per 1,000, \$17.50; per case of 2,000 pips, \$32.50.

Best Hamburg. Strongest pips for late winter and spring forcing. Per doz., 25 cents; per 100, \$1.75; per 1,000, \$16.00; per case of 2,000 pips, \$30.00.

Pink Flowered. Rosy pink, fragrant. Pips. Per doz., 75 cents; per 100, \$5.00.

Fortin's Giant. A very large growing variety adapted to late forcing and out-of-door cultivation. The pure white bells are much larger than the ordinary variety, and borne upon taller stems. Pips, per doz., 50 cents; per 100, \$3.00; per 1,000, \$22.00.

Large Dutch Clumps. Each contains many flowering pips; best for planting in the open ground. Each 30 cents; per doz., \$3.00; per 100, \$20.00. By express only.

ACHIMENES.

The scaly tubers should be potted during January or February in a compost of turfy loam, leaf mould and sand. They should be grown in a moist, warm temperature, shaded from the sun until they begin to bloom, when they may be kept cooler to prolong the duration of the flowers.

HARDY PERENNIAL PLANTS.

OLD-FASHIONED HARDY GARDEN FLOWERS.

Farquhar's Hybrid Delphiniums.

THE favorites of the old-time gardens are coming to the front, and deservedly so. No feature of the garden can be more satisfactory than a well-arranged Hardy Plant border, producing from April to November a continuous succession of charming flowers, much more interesting than the usual greenhouse assortment, and equally valuable for garden embellishment and cutting purposes. The Hardy Plants have the advantage of greater permanency, requiring only cultivation, enriching, a slight mulch during winter, and occasional checking of the more robust growers, to keep the plantation in good condition for years.

Where early flowers are desired we advocate the introduction of groups of Narcissi, Scillas, Crocuses, Snowdrops, Chionodoxa and other Spring-flowering bulbous plants, which should be planted in October, as well as Montbrietias, the hardier species of Gladioli and Lilies for summer blooming, and which may be planted in spring.

We limit the present list to varieties which admit of being planted at this season and which have been found generally hardy and desirable for the severe climate of New England.

FARQUHAR'S COLLECTION OF HARDY FLOWERS.

For purchasers who may not be familiar with the different sorts we offer the following collections for succession of bloom from early spring until November :

JAPANESE FERN BALLS.

IN southern Japan the long rhizomes of the beautiful fern Davallia Bullata, are collected by the country people and wound about balls of sphagnum moss. These may be started into growth by immersing them in water until saturated, then hanging them in a moderately warm temperature. They should be immersed every two or three days. They may be dried off and allowed to rest during summer and started again in autumn. Davallia Bullata is hardy in New England.

Dormant Balls, each, 50c.; by mail, 60c.; per doz., \$5.00; per 100, \$35.00.

Started Balls, by express only, each 75c.; per doz., \$7.50.

CYCLAMEN.

Our strains of Cyclamen have gained a national reputation and are freely acknowledged to be the finest in the country. At the World's Columbian Exposition, at which specialists from all over the world competed, our Cyclamen were the finest and were awarded the Medal and Diploma. In commenting on the exhibition, the "Garden and Forest" said: "The contrast was great between the small flowered type (of other exhibitors) and the large flowers in the exhibition of R. & J. Farquhar & Co."

Farquhar's Columbian Prize. The flowers are of largest size and finest form, with broad massive petals. This strain embraces all the finest colors found in Cyclamen.

Prices Subject to Market Fluctuation.

WE sell the finest quality of new crop Grass and Clover Seeds; selected, re-cleaned, tested. Customers in comparing prices should bear in mind that there are several grades in the trade, according to weight, purity, and germination.

GRASSES.

- Timothy or Herds Grass.** *Phleum pratense*. This Grass is usually considered and treated as a short-lived perennial, and hence is the best grass to grow in a short rotation. It succeeds best on moist loams and clays naturally rich in humus or on those which have been heavily manured. It grows in loose tufts, with few short leaves, so that Red top or Red Clover should be sown with it to furnish heavy bottom growth of leaves. Sow one-half bushel per acre if alone. (45 lbs. per bushel.) Per bushel, \$3.25.
- Red Top.** *Agrostis vulgaris*. A good permanent grass, which grows naturally in cold, wet soils. It should be grown in cultivation in similar situations. A perennial with long creeping stems and underground runners; one of the best bottom grasses bearing large numbers of fine root leaves, making it invaluable for sowing with erect tufted Grasses, such as Orchard and Timothy filling in between the clumps and producing a continuous turf. Sow four bu. per acre if alone. (10 lbs. per bu.) Per lb., 15 cents; per bushel, \$1.25; 100 lbs., \$10.00.
- Red Top. Clean Seed.** Chaff and weeds sifted out; pure fancy seed. We recommend this to all who desire the best results, as its absolute purity and excellence insure satisfaction for farm, park or lawn. Excellent for restoring worn-out swards. Per lb., 20 cents; 100 lbs., \$15.00.
- Kentucky Blue.** *Poa pratensis*. Known as *June Grass*. A perennial especially adapted to dry limestone soils, but will thrive on any good ground which is not too wet. Very nutritious, hardy, and early. Sow three bushels per acre if alone. (14 lbs. per bushel.) Per lb., 25 cents; 100 lbs., \$18.00.
- Rhode Island Bent.** *Agrostis canina*. A bottom Grass, suitable for using with tufted varieties. Hardy and early and a grass that will withstand heat and dry weather. Sweet and nutritious and relished by all kinds of stock. Sow four bushels per acre if alone. (10 lbs. per bushel.) Per lb., 30 cents; per bushel, \$2.50; 100 lbs., \$22.50.
- Orchard.** *Dactylis glomerata*. A deep rooted perennial, growing in tufts. A strong, vigorous grower, which succeeds best on rich lands or clayey soils. Should be cut for hay at the time of first flowering. Sow three bu. per acre if alone. (14 lbs. per bu.) Per lb., 25 cents; per bushel, \$2.75; 100 lbs., \$18.00.
- Tall Oat Grass.** *Avena elatior*. A perennial which grows in loose tufts and throws up an abundance of leaves and tall stalks. Succeeds best on rich upland soils, and when once established is a great drought resister. Early. Makes its heaviest growth the second year. Lb. 35c.; 100 lbs., \$25.00.
- Italian Rye Grass.** *Lolium Italicum*. A biennial which grows in broad compact tufts, producing a large number of stalks from a single root. Succeeds best in warm, rich, moist soils. A rapid grower and a good crop to rid land of weeds, as it quickly overtops them, preventing them from ripening seeds. Sow three bushels per acre. (22 lbs. per bushel.) Per lb., 15 cents; 100 lbs., \$9.00.
- Perennial Rye Grass.** *Lolium perenne*. A perennial forming large and broad tufts. Grows best on stiff, wet soils, and on heavy clays or marshy lands where the soil is good, it is one of the best pasture Grasses. In such situations it will last five to seven years, but on dry upland soils it is short-lived. (22 lbs. per bushel.) Finest seed, our direct importation. Per lb., 12 cents; 100 lbs., \$8.50.
- Meadow Fescue.** *Festuca pratensis*. A perennial which succeeds best on rich moist loams. A heavy yielder on soils perfectly adapted to it, and also an excellent pasture Grass. Sow two and a half bushels per acre. (15 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$15.00.
- Various Leaved Fescue.** *Festuca heterophylla*. Early hardy perennial two or three feet high. Valuable for permanent pasture. Thriving in high altitudes and in shady locations. Per lb., 30 cents; 100 lbs., \$25.00.
- Hard Fescue.** *Festuca duriuscula*. This splendid Grass is found in all the best lawns and permanent pastures; invaluable for dry soils; of low, dense-growing habit. Sow three bushels per acre. (14 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$14.00.
- Red or Creeping Fescue.** *Festuca rubra*. A splendid Grass for light sandy soils. Extreme drought resister. Valuable in seeding banks and exposed locations, binding drifting sands, and as lawn grass for shady spots. Forms a very close, durable turf, suitable for putting greens. Lb., 20c.; 100 lbs., \$15.00.
- Sheep's Fescue.** *Festuca ovina*. Of dense growth; excellent for dry situations and sheep pastures. Sow two and a half bushels per acre. (12 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$14.00.
- Fine Leaved Sheep's Fescue.** *Festuca ovina tenuifolia*. A very fine leaved Grass, dwarf in habit. Will succeed in dry, high locations and inferior soils. Hardy and durable. Per lb., 35 cents; 100 lbs., \$30.00.
- Tall Fescue.** *Festuca elatior*. Excellent for permanent pastures on moist soils, on which it yields immensely. Cattle and stock eat it greedily. (15 lbs. per bushel.) Per lb., 50 cents; 100 lbs., \$40.00.
- Crested Dog's Tail.** *Cynosurus cristatus*. A perennial valued for its dwarf habit and its hardiness. Sow two bushels per acre. (28 lbs. per bushel.) Per lb., 40 cents; 100 lbs., \$30.00.
- Sweet Vernal, True Perennial.** Many seedsmen substitute the annual variety for this invaluable Grass, as the seed of both is similar. Invaluable in lawns on account of its very early growth and fragrant odor which it imparts to the other grasses in drying. Remains green very late. Hardy and permanent. Per lb., 70 cents.
- Meadow Fox-Tail.** *Alopecurus pratensis*. Very valuable in mixtures for permanent pastures exposed to heat and drought; early and rapid in growth. (8 lbs. per bushel.) Per lb., 40 cents; 100 lbs., \$30.00.
- Rough-Stalked Meadow.** *Poa trivialis*. An excellent permanent Grass to mix with other varieties for moist pastures. Produces a constant supply of nutritious herbage. Suitable for growing in shade. Sow one and a half bushels per acre. (14 lbs. per bushel.) Per lb., 50c.; 100 lbs., \$40.00.
- Wood Meadow.** *Poa nemoralis*. Well adapted for growing under trees and in shaded situations. Dwarf and fine growing. Sow two and a half bushels per acre. (14 lbs. per bushel.) Per lb., 50 cents; 100 lbs., \$40.00.
- Water Meadow Grass.** *Poa aquatica*. A creeping rooted perennial, grows in alluvial marshy soils, slow running streams, margins of fresh water, lakes, etc. An excellent pasture grass for wet situations. Trout and wild ducks relish the seeds and young shoots as food. Per lb., 50 cents.

CLOVERS.

- Red Medium.** *Trifolium pratense*. The best Clover for all practical purposes. Succeeds best on rich, warm loams, containing humus. Lime and potash are essential for its best development. A biennial, but by close pasturage may be made to last several years. Per lb., 25 cents; 100 lbs., \$18.00.
- Mammoth or Large Red Northern.** *Trifolium pratense*. On rich loamy soils this variety grows nearly twice as large as the Medium Red Clover, and earlier to start a spring growth. Per lb., 30 cents; 100 lbs., \$20.00.
- Alsike or Swedish.** *Trifolium hybridum*. This Clover will thrive where the soil is quite wet, and will even stand flooding without being killed. Productive and sweet and extremely valuable for both pasturage or soiling. The flowers afford a fine pasturage for bees. Per lb., 25c.; 100 lbs., \$18.00.
- White Clover.** *Trifolium repens*. This Clover should always be sown on permanent or temporary pastures. Will grow on any soil, but especially adapted to low meadows, where the surface soil is mellow and rich. Ordinarily will not last more than two years on hard or shallow soil. Sweet and nutritious. Per lb., 25 cents; 100 lbs., \$20.00.
- Alfalfa or Lucerne.** *Medicago sativa*. The chief merit of Alfalfa is the fact that it can be cut three or four times in a season. The soil should be deep, rich, and well prepared. It does not succeed on compact clay, nor on land with impervious subsoil. The roots shoot downward till they are ten to fifteen feet below the surface, and will therefore resist the driest weather. Per lb., 25 cents; 100 lbs., \$18.00.
- Scarlet or Crimson Clover.** *Trifolium incarnatum*. This annual Clover thrives best on warm, loose, sandy soil. Its chief value is as a winter or early spring pasture crop and as a green manure. May be sown at any time from May to October. Per lb., 15 cents; 100 lbs., \$12.00.
- Yellow Trefoil.** *Medicago lupulina*. On very light, dry, or poor ground this variety is valuable for a sheep pasture, and can be sown alone or with other Grasses. Per lb., 15 cents; 100 lbs., \$10.00.

OUR SPECIAL GRASS MIXTURES.

FOR HAY AND PERMANENT PASTURES.

GRASSES FOR PERMANENT PASTURES AND MEADOWS.

CONTAINING only the most suitable Grasses, the proportionate quantity of each being regulated by soil, situation, and purpose for which desired. The object to be attained is a constant, successive growth of rich pasturage from spring till fall. It is a well-established fact that soils sown with a variety of different grasses which are adapted to the soil, and which attain perfection at alternate months from April to September, *produce very much larger and more satisfactory crops, both for hay and pasturage*, than when only one or two kinds of grasses or clovers are sown. The results given by our mixtures have been most satisfactory, and have resulted in a very large increase in our trade for same. We unhesitatingly recommend them for use on the largest scale. Fall seeding is preferable, but spring sowing will be successful if done early, when the land is cool and moist. In addition to the Grasses, we advise sowing 10 lbs. of Mixed Clover Seed per acre. Clovers in their young state are tender in our climate, and should therefore be sown in spring, separately, being heavier in weight.

RYE, FALL OR WINTER.

The time for sowing is from the middle of August to the last of September. Prepare the ground as for Wheat and sow broadcast, or with a drill at the rate of one and one-half bushels per acre. This has no equal as a crop to be used for late fall and early spring pasture, and is one of the best to turn under for green manure. Per bushel, \$1.50; 2 bushels, \$2.50; 10 bushels, \$11.50.

SAND VETCH, OR HAIRY VETCH.

Vicia villosa.

Sand Vetch, or Hairy Vetch, is an annual, a native of western Asia, and has been cultivated in this country and Europe for about fifty years. Its desirability as a forage crop has become established, and it is being cultivated each year on a more and more extensive scale. It should be sown at the rate of from four to six pecks per acre, broadcast or in drills, from August 15 to October 1, and with it as a supporting crop to raise the vines up off the ground there should be planted from two to four pecks of winter Wheat, Oats, or Rye. It should be cut while the Vetch is in full bloom. It may be planted in spring in order to supply an early green crop for soiling purposes, or in midsummer for late autumn forage. Per lb., 15c.; 100 lbs., \$10.00.

10 lbs. Mixed Clover Seed sufficient for one acre,
\$2.00.

CANARY GUANO.

ONE of the best and most convenient fertilizers for use in the greenhouse, conservatory and flower garden, as well as for palms, ferns and other house plants. Per original tin, 50c.

PULVERIZED SHEEP MANURE. (*Purity Brand.*)

A SOLUBLE plant food, highly recommended for all purposes where a first-class fertilizer is required. It is a pure and natural manure, and has long been recognized as one of the most beneficial. As a top dressing for lawns it is unequalled, being free from weed-seeds and extremely stimulating. For lawns, it should be used at the rate of 500 pounds per acre. As a fertilizing agent for plants, in-doors and in the open garden, it is one of the very best.

PRICE, ton; \$35.00; half-ton, \$17.50; 500 lbs., \$8.75; 100 lbs., \$2.00; 50 lbs., \$1.25; 25 lbs., 75c.; 10 lbs., 40c.; 5 lbs., 25c.; 1 lb., 10c. No charge for sacks. F. O. B. cars, Boston.

PURE CANADA UNLEACHED HARDWOOD ASHES.

PURE wood ashes is one of the best fertilizers for top-dressing lawns, grass lands, and for seeding down; also for fruit of all kinds, especially strawberries, peaches, and apples. They are exceedingly valuable for lawns, imparting a rich, dark shade of green, destroying insects and bad weeds, particularly moss, which is so common on lawns. 100-lb bag, \$1.25; 200 lbs., \$2.00; ton, \$16.00. IN CARLOAD LOTS OF FROM 15 TO 25 TONS, at \$11.50 per ton in bulk, or \$13.50 per ton in 100-lb. bags, delivered at any freight station in Massachusetts, Vermont, New Hampshire, Rhode Island, Connecticut, and to any station in Maine except points on the Maine Central R.R.

PURE GROUND BONE

IS made from the best quality of bone, finely pulverized by improved machinery. It is far superior to some ground bone in the market, which is often composed of refuse bones from which the plant-food has been largely removed in manufacturing glue and other products. Analysis: Nitrogen, equal to Ammonia, 3 to 4 per cent.; Phosphoric Acid, 22.80 to 25.23 per cent.; equal to Bone Phosphate, 50 to 55 per cent. Price per ton in 200-lb. bags, \$29.50; per ton in 100-lb. bags, \$30.00; barrel 250 lbs., \$5.00; 100 lbs., \$1.80; 50 lbs., \$1.00; 25 lbs., 75c.; 10 lbs., 35c.

THOMSON'S VINE, PLANT, AND VEGETABLE MANURE.

THOMSON'S Vine and Plant Manure is the result of long experience and experiment. It is so compounded as to combine immediate with lasting effects, and is a perfect food for the Vine and other fruit-bearing plants; also for nearly all other Plants and Vegetables.

PROPORTIONS IN WHICH THE MANURE MAY BE USED.

Vine Border. For making up a Vine Border, $\frac{1}{2}$ cwt. to the ton of loam. For surface dressing Vine Borders, 2 lbs. per yard super, applied early in the season, and 1 lb. per yard super after Grapes are thinned; mix with a little fine soil when roots are quite near the surface; if not very near the surface, sprinkle the manure on and fork it in. In both cases, give a slight watering. See that the thorough watering of the Borders is done some time previous to the top dressing.

Peaches, Nectarines, Figs. For Borders for Peaches, Nectarines, Figs, etc., $\frac{1}{4}$ cwt. to the ton of loam. Original bags, 112 lbs., \$7.00; 56 lbs., \$4.00; 28 lbs., \$2.25; 7 lb. tin, \$1.00.

THOMSON'S SPECIAL CHRYSANTHEMUM MANURE.

THOMSON'S Vine and Plant Manure is admirably adapted for mixing with the soil when potting such plants as Chrysanthemums.

The **Special** Manure is meant to be used as an additional stimulant during the growing season.

A heaped dessertspoonful will be sufficient for a 10-inch pot, sprinkled over the surface of the soil, and watered in with tepid water. This may be given three times during the growing season. 56 lbs., \$7.00; 28 lbs., \$4.00; 14 lbs., \$2.25; 7 lbs., \$1.25.

A partial view of the celebrated lawn on the estate of Mr. Walter Hunnewell, Wellesley, Mass., the product of Farquhar's Evergreen Lawn Grass Seed.

FARQUHAR'S EVERGREEN LAWN GRASS SEED.

SPECIALLY reliable mixture of dwarf, hardy, fine-leaved grasses, the growth of which has been *thoroughly tested*. The best time of the whole year to renovate worn or burned-out lawns is in the months of September or October, thus ensuring an early start in spring.

One quart will sow 300 sq. ft.; four quarts will sow 1,200 sq. ft.; one peck will sow 2,400 sq. ft.; one bushel (20 lbs.) will sow 10,000 sq. ft.; four bushels (80 lbs.) is sufficient for one acre.

PRICE:

Qt., 20 cts., by mail, 25 cts.; 4 qts., 60 cts., by express only; pk., \$1, by express only; bus. (20 lbs.), \$4, by express or freight.

FARQUHAR'S "TERRACE MIXTURE."

A mixture of strong, deep-rooted Grasses for "banks" or "terraces." Although the grasses are strong and deep-rooted, they will produce a fine green velvety appearance, and also prevent washing away during heavy rains.

PRICE:

Quart, 35 cts., by mail 45 cts.; peck, \$1.50; bushel of 20 lbs., \$5.

FARQUHAR'S SHADY MIXTURE LAWN GRASS SEED.

A COMBINATION of the finest Grasses which thrive naturally under the shades of trees or buildings. An excellent time for seeding down this mixture is in the months of September and October or March and April, particularly when the leaves are off the trees. Our mixture is favorably known for producing an enduring sward of velvety green.

FARQUHAR'S "PUTTING GREEN" MIXTURE.

The very finest low growing Grasses are contained in this Mixture, and very hardy. This Mixture will produce a beautiful and lasting green turf wherever used, calculated to withstand hard tear and wear.

FARQUHAR'S "GOLF LINKS" MIXTURE.

We have supplied several Clubs with this Mixture, which is the result of a careful study of the requirements for making beautiful Golf Links, and we do not hesitate to say that it has given entire satisfaction.

Price of the above 3 mixtures: Quart, 35 cts., by mail 45 cts.; peck, \$1.50; bushel of 20 lbs., \$5.
